THE PATH TO REVIT MASTERY

The Revit mastery path is a collection of 150+ skills, grouped into five skill levels. Within each skill level, the skills are further grouped into categories that roughly correspond to Revit's categories. Take a look at the skills in each level. Where are you on the path to Revit mastery?

1. Newbie

A Newbie user has no practical experience with Revit. They're the equivalent of a white belt in martial arts and are working toward their yellow belt. These users are developing the basic skills required to contribute to a Revit project. Once a user has completed basic Revit training and demonstrated mastery of these skills, they can move on to the skills in the next category.

Annotation

- Add text and dimensions
- Add leaders to text notes

Ceilings

- Create a ceiling

Components

- Place components

Floors

- Create a floor

Grids & Basic Structure

- Create / edit column grid
- Place structural elements on grid

Interface

- Pan, orbit, zoom views

Levels

- Create / edit floor levels

Roofs

- Create a flat roof
- Edit roof types

Site

- Create flat topography
- Create site pad
- Add parking components

Vertical Circulation

- Create railing
- Create ramp

Views & Sheets

- Create plan callouts
- Create sections and elevation views
- Create new sheets
- Add views to sheets
- Change sheet titleblock
- Print sheets

Walls

- Create walls
- Create curtain walls
- Add doors & windows to walls

2. Beginner User

A Beginner user has been through initial Revit training and has completed one project in Revit. They are comfortable with the principles of Revit and can model and annotate most standard elements.

Annotation

- Add room tags to rooms
- Tag components
- Add filled regions
- Create rooms
- Edit annotation types

Ceilings

- Create / edit a ceiling type

Components

- Edit component types
- Load external components

Details

- Draw model lines
- Use linework tool
- Draw detail lines
- Create drafting view

Floors

- Edit existing floor type

Interface

- Change view background color
- Change view background color

- Open / close Project Browser & Properties window

Levels

- Adjust level heads in elevation / section views

Materials

- Paint materials

Miscellaneous

- Edit project information
- Link and import DWG files

Renderings

- Render a 3D view

Roofs

- Create simple sloped roof

Schedules

- Update parameter values using a schedule
- Create drawing index
- Edit fields in an existing schedule

Site

- Create contoured topography
- Add property line

Vertical Circulation

- Create simple component stair
- Edit ramp type

Views & Sheets

- Create print sets
- Adjust view crop
- Apply section box to 3D views
- Create perspective views
- Apply view template to view
- Adjust section depth

Walls

- Create sweeps and reveals
- Adjust wall constraints and offsets
- Edit wall type

Worksharing

- Change the current workset

3. Intermediate User

An Intermediate user has completed 2 – 4 Revit projects. They are comfortable editing and creating new system types. Intermediate users can also create schedules and can demonstrate how to work in a workshared environment.

Annotation

- Create new annotation types
- Create annotation families
- Create basic filled regions

Area Plans

- Edit color scheme
- Create area plan
- Adjust area lines

Components

- Create new component types

Conceptual Models

- Insert and edit 3D forms

Details

- Use detail components

Floors

- Create new floor type
- Create openings in floors
- Add slab edges to floors

Grids & Basic Structure

- Edit grid types

Interface

- Customize user interface using Options menu
- Edit keyboard shortcuts

Levels

- Create / edit level types

Materials

- Modify existing materials
- Split face

Miscellaneous

- Automate a basic task using Dynamo
- Create a group of elements
- Link an RVT file

Renderings

- Create a walkthrough
- Render in the cloud
- Adjust rendering image exposure
- Create interior renderings

Roofs

- Add fascia and gutters to roof
- Create new roof type
- Add roof dormers

Schedules

- Create new schedule

Site

- Split toposurface

Vertical Circulation

- Edit stair type
- Create multi-story stair

Views & Sheets

- Create a new revision
- Add a revision to a sheet
- Create new view types
- Create new viewport types
- Edit view templates
- Create exploded 3D views
- Create scope boxes and apply to views

Walls

- Add doors to curtain walls
- Adjust mullion spacing in curtain wall
- Create sweep and reveal profiles
- Edit a wall's profile
- Create wall types

Worksharing

- Create a new local file
- Change an element's workset
- Change the current workset

4. Advanced User

An Advanced user has completed 5+ projects in Revit. Advanced users can create advanced system families like stairs and compound walls. They can also create their own basic families. Advanced users have also used Dynamo to automate simple tasks in Revit.

Annotation

- Create complex filled regions

Area Plans

- Create new color scheme

Components

- Create new families

Conceptual Models

- Create walls, floors, roofs from mass
- Create conceptual mass families

Details

- Create detail components

Grids & Basic Structure

- Create new grid types

Interface

- Set file locations
- Add default template locations

Materials

- Create new material

Miscellaneous

- Create project parameters

Renderings

- Create night renderings

Roofs

- Create complex sloped roof

Schedules

- Create multi-category schedules
- Create key schedule

Site

- Add street, curb, sidewalk and retaining walls

Vertical Circulation

- Create new stair type

Views & Sheets

- Create new view templates
- Create new titleblocks
- Copy views from another project

Walls

- Create new curtain system
- Adjust wall layers
- Create compound wall types
- Create in-place walls

Worksharing

- Create new worksets

5. Power User

A Power User is an advanced user of Revit who is experienced with the more high-level features of the software including family creation and automation using Dynamo or macros. A power user typically acts as the BIM lead on their projects. Power Users also act as trainers, helping less experienced users develop their skills.

Components

- Create an adaptive component family
- Create a complex parametric family

Interface

- Load external add-ins
- Create custom Project Browser views

Levels

- Change project location

Miscellaneous

- Automate a complex task using Dynamo
- Train new Revit users
- Create a macro to automate a task
- Transfer project standards from another file
- Create shared parameters
- Create / edit Revit templates
- Create global parameters

Vertical Circulation

- Create a complex custom stair

Views & Sheets

- Create new view tags

Worksharing

- Setup a model for worksharing
